

Job-specific Solutions **Bridge Access**

Bridge access is in your reach – get closer with Safway’s products.

This page (clockwise): Alexandra Bridge (Ontario, & Quebec, Canada); Lewis & Clark Bridge (Rainier, OR & Longview, WA); Vincent Thomas Bridge (Long Beach, CA).

Facing page (clockwise): Tacoma Narrows Bridge (Tacoma, WA), Liberty Road Bridge, Sydney Harbor Bridge (Sydney, Australia); Kenosha Bridge (Kenosha, WI).

The unique demands of bridge projects deserve specialty access solutions. Our specialty? Providing complete ground-based and suspended access solutions for bridge maintenance, inspection or repair.

Gaining access to even the most unreachable bridge locations has never been easier.

For Safway Services, bridge access is part of our business. We have been a leader in providing safe and reliable scaffold, access products and solutions since 1936.

Get Your Project Off the Ground

Successful projects begin with efficient products. Many of Safway’s products are often paired together, including scaffold structures erected on top of platforms, to allow optimal proximity to any bridge surface for maintenance, inspection or repair. An array of our equipment has been used on bridges of all types and sizes throughout North America:

- QuikDeck™ Suspended Access System
- Ground-based hoists and lifts
- Systems™ Scaffold
- Shoring

Suspended Access: QuikDeck™

Designed for fast installation and worker safety, QuikDeck™ improves platform stability and enables multiple trades simultaneous access to the platform.

Other benefits of QuikDeck™ include:

- Open workspace and more room for material movement
- Components can be easily handled by one person
- Can be built in the air or on the ground and then hoisted into position

Access From the Ground, Up

Since every jobsite is different, Safway offers a multitude of ground-based hoists and lifts to serve the unique needs of your bridge project:

- Mast climbers
- Transport platforms
- Personnel hoists
- Material hoists

Equipment runs on rigid masts that are tied into the structure. Safe, easy-to-operate units help move your crews and materials.

Add Versatility With Systems™

Systems™ Scaffold is built from the ground up, making it ideal for the dynamic demands of bridge work.

Its unique, versatile ring set design accepts up to eight members, and horizontal and diagonal members can be individually placed to accommodate any shape, including bridge piers.

Additional Support: Shoring

If your bridge access needs require additional support, Safway's shoring provides a simple solution.

Shoring systems are easy to assemble with time- and cost-saving benefits like self-contained adjusting hardware and extension frames.

“Workers do not have to work in a confined space, which allows a safer workplace and less loss of time due to material movement on the platform.”

Phillippe Goulet on working with QuikDeck™
Engineer, Pomerleau

Custom Engineering

Throughout your project, you'll have some of the industry's best services and resources at your disposal.

Safway is home to one of the largest in-house engineering departments in the industry, including 3-D modeling and animation capabilities.

Our Bridge Division, based out of Scotia, NY, specializes in providing valuable resources and project-specific access solutions for bridges.

Labor Resources & Safety Training

Our dedication to training is evident through our exceptional safety record. With approximately 90 branch locations in the U.S. and Canada, Safway has access to one of the largest labor pools of qualified scaffold erectors.

If you'd like to supply your own workers, Safway also offers onsite training services. In fact, Safway is the only scaffold company with its own Scaffold Training University.

All training materials, safety seminars and literature are designed in compliance with current OSHA, Cal/OSHA and OH&S regulations and are taught by experienced Safway personnel.

How Can We Help You?
