

Company introduces SafScan™ High-Definition Laser Surveying

Safway® Group

Safway® Group is introducing SafScan™ High-Definition Laser Surveying to provide highly accurate 3-D images of existing conditions at any industrial site. “Instead of relying on out-of-date drawings or estimated measurements to engineer and plan projects, SafScan creates a precise, as-built copy of any facility using state-of-the-art laser scanning equipment,” said Safway Division Manager Jerry Dolly.

Offering experience and expertise in access, scaffolding, insulation, fireproofing, surface preparation and coatings, Safway provides high-performance multiservice solutions through more than 90 locations across North America and a growing system of distributors worldwide. Safway is the first and only access and industrial service company to provide clients with high-definition laser surveying.

“SafScan provides a level of precision that is nothing short of amazing,” explained Dolly. “By using SafScan, we can collect 1 million data points per second. This allows us to design, plan, order equipment and materials, and schedule labor to improve productivity and safety on a solid, reliable foundation of information.”

The opportunities for project improvement and workflow as a result of using SafScan are enormous.

After the point-cloud data (a 3-D coordinate system of points measured by SafScan) has been gathered, Safway’s engineers can begin designing and planning a comprehensive solution for the job. Whether it’s new pipe modeling for a pipe rack project or taking detailed I-beam or tank measurements so scaffolding and platforms can be built to fit before any equipment arrives on the jobsite, SafScan provides a head start that can save valuable time and money caused by project delays and retrofits.

No industry is beyond the scope of SafScan. Safway Group companies serve the petrochemical, oil and gas, power, refining, marine, manufacturing, transportation and commercial construction industries, and include CL Coatings, Industrial Coatings and Fireproofing, Redi Solutions, Safway Atlantic, Safway Services, Safway Services Canada, S&E Bridge & Scaffold, and Swing Staging.

The opportunities for project improvement and workflow as a result of using SafScan High-Definition Laser Surveying are enormous. “Custom solutions utilizing SafScan’s equipment, services and resour-

ces include 3-D drawings/models, site/plant documentation, project planning, sections and elevations, and ‘clash’ detection or clearances,” added Dolly.

By taking advantage of Safway’s complete array of access and industrial services — including SafScan — time and costs can be

saved while quality, productivity and safety are enhanced. Safway has been an industry leader since 1936.
